

En Vivo Systime

Esta obra pretende reunir los conflictos con más proyección mediática desde el final de la Guerra Fria, sobre todo aquellos en los que Estados Unidos está implicado directamente Pretende desentrañar los procesos de manipulación de la información, de desinformación y de propaganda que acompañan a los conflictos armados Busca en estas guerras los modelos y formas de la más moderna propaganda, los cuales en realidad no difieren tanto de lo que muchos llaman vieja propaganda Intenta describir y analizar las técnicas de manipulación de la opinión pública y el manejo inteligente de la comunicación Nos sorprendería comprobar cómo podemos ser engañados una y otra vez con la más absoluta impunidad- desde la guerra del Golfo de 1991 y sus antecedentes desde el punto de vista de la comunicación (Vietnam, Malvinas, Grenada y Panamá), hasta la guerra de resistencia a la ocupación en Irak, pasando por los conflictos de la ex Yugoslavia en la década de los noventa, así como por algunos significativos conflictos africanos, naturalmente por el terrorismo, los grandes atentados, la guerra de Afganistán, sin olvidar el conflicto palestino-israelí (sobre todo la segunda Intifada)

List of members in each volume.
Ultrasound is used to demonstrate and classify numerous vascular diseases including · cerebrovascular and transcranial · lower and upper limb arterial · deep vein thrombosis · deep and superficial venous reflux · renal, hepatportal, mesenteric and penile. Making Sense of Vascular Ultrasound is designed to give users a hands-on, practical approach to the diagnosis of vascular disease. This pocket-sized handbook provides easy to read, concise, point-form text and includes high-resolution ultrasound images and informative line diagrams. Each regional chapter covers · anatomy · pathology · clinical presentations · differential diagnosis · treatment · what the doctor needs to know · normal findings and criteria for disease as seen by ultrasound · comprehensive protocols · ultrasound images to collect for reports The book also provides an overview of the physical principles of ultrasound, the physiology of blood flow, vascular pathology, setting up a vascular ultrasound diagnostic service, and interventional vascular ultrasound procedures.

This introduction and textbook familiarizes engineers with the use of mathematical and computational modeling and simulation in a way that develops their understanding of the solution characteristics of a broad class of real-world problems. The relevant basic and advanced methodologies are explained in detail, with special emphasis on ill-defined problems. Some fifteen simulation systems are presented on the language and the logical level. Moreover, the reader also can accumulate an experiential overview by studying the wide variety of case studies spanning much of science and engineering. The latter are briefly described within the book but their full versions as well as some simulation software demos are available on the Web. The book can be used for courses on various levels as well as for self-study. Advanced sections are identified and can be skipped in a first reading or in undergraduate courses.

Since their discovery approximately 25 years ago, adenosine receptors have now emerged as important novel molecular targets in disease and drug discovery. These proteins play important roles in the entire spectrum of disease from inflammation to immune suppression. Because of their expression on a number of different cell types and in a number of different organ systems they play important roles in specific diseases, including asthma, rheumatoid arthritis, Parkinson’s disease, multiple sclerosis, Alzheimer’s disease, heart disease, stroke, cancer, sepsis, and obesity. As a result of intense investigations into understanding the molecular structures and pharmacology of these proteins, new molecules have been synthesized that have high specificity for these proteins and are now entering clinical trials. These molecules will define the next new classes of drugs for a number of diseases with unmet medical needs.

Includes entries for maps and atlases.

A guide to the many simple, effective, and inexpensive measures that can reduce the prevalence and severity of anaemia caused by hookworm infection. The main aim is to help practitioners, working in the field, know how to detect infection and associated anaemia, and then implement appropriate measures, whether for individual cases or entire communities. In view of the widespread tendency to underestimate the importance of hookworm infection and accord it low priority, the book also performs a persuasive function, documenting the major public health consequences of hookworm anaemia, illustrating the striking results of control measures, and encouraging scientists to take a greater interest in this challenging disease. To this end, descriptions of the simple measures available for control are placed within the context of the many complex factors that guide their selection and determine their effectiveness. Because confirmation of infection is so simple, chapters on prevention and control concentrate on information that can help health workers know when to suspect infection and then carry out the relevant detective work. Different control strategies described include standard case management, targeted treatment, mass treatment, and supplementary iron distribution. For standard case management, readers are given detailed advice on the best drugs and doses for iron therapy and anthelmintic treatment, which form the foundation for hookworm anaemia control.

Plant-Pathogen Interactions gathers together some of the key methods used in studies of this field and includes chapters describing how this knowledge is being used to develop new strategies for disease control.

Each vol. consists of papers reprinted from various periodicals. etc.

It is well established that memory for emotional information is generally better than for neutral information. This Research Topic comprises a set of papers focusing on memory and its relation with motivational and emotional processes, ranging from electroencephalographic evidences of emotional modulation of memory systems, to the role of neurotransmitters/neuromodulators (i.e. endocannabinoid, glucocorticoid, serotonin, noradrenergic, dopaminergic systems), and second messengers on emotional memory, and the specific involvement of cerebral areas on the relation between memory and motivational/emotional processes (i.e. prefrontal cortex, amygdala, accumbens). In particular, some of the topics discussed in this Research Topic will include: cortical activity correlates of emotional modulation of memory systems, interactions between ascending vagal fibers and central noradrenergic systems in modulating memory for emotionally arousing events, involvement of prefrontal /accumbal catecholamine system in processing emotional and motivational salience, role of both negative and positive emotional arousal in increasing persistence of consolidated memories through modulation of second messengers and the involvement of emotional arousal in the activation of amygdala projections, that can then modulate different types of memory.

This book combines detailed scientific historical research with characteristic philosophic breadth and verve.

For book publishing contacts on a global scale, International Literary Market Place 2006 is your ticket to the people, companies, and resources at the heart of publishing in more than 180 countries world-wide-from Afghanistan to Zimbabwe. With the flip of a page, you'll find completely up-to-date profiles for more than 16,500 book-related concerns around the globe, including... 10,500 publishers and literary agents 1,100 major booksellers and book clubs 1,500 major libraries and library associations... and thousands of other book-related concerns-such as trade organizations, distributors, dealers, literary associations, trade publications, book trade events, and other resources conveniently organized in a country-by-country format.

Plus, ILMP 2006 includes two publisher indexes-Types of Publications Index and Subject Index-that offer access to publishers via some 140 headings. Additional coverage includes information on international literary prizes, copyright conventions, a yellow pages directory, and a worldwide calendar of events through 2011.
